PROFESSIONAL SUMMARY

Software Engineer at Asurion since 2021 working in two distinct environments. (1) Custom full-stack engineering: internal workflow applications (helpdesk incident queue, incident assignment, PTO and approval flows) built with Django, Python, and PostgreSQL on AWS Lambda and ECS, with infrastructure provisioned as code with Terraform and tested and deployed with GitHub Actions. (2) Power Platform apps, including an AI job-description generator (Copilot Studio, Power Apps code app, Dataverse), that run in Microsoft's managed environment and security rather than infrastructure I build. Also built reporting automations in Python and Power BI. Built TableEdge (tableedge.io), a personal weekend project now in production with one paying restaurant customer. Holds a Bachelor's degree in Computer Science and training in data analytics. Tri-lingual: English, Arabic, Kurdish. Data-driven and creative problem-solver; App Developer (ScoreBoard Sync Pro).

WORK EXPERIENCE

Software Engineer 2 · DevOps Engineer 2 · Technology Analyst 2021 – Present
Asurion | Nashville, TN — Technology Automations & Reporting Solutions

- Responsible for evaluating, designing, and developing tools, reports, and automations to improve IT operational procedures and the internal customer support experience.
- Build and maintain custom internal workflow applications in Django and Python on PostgreSQL (helpdesk incident queue, incident assignment, PTO requests, approval flows), including an internal website to manage the service desk and desktop support, and add features on request in Jira and Confluence ticket flows; push events to BigPanda for alerting.
- Use Terraform to build application backend infrastructure as code on AWS: databases, networking rules, ECS, Lambda functions and related resources, so environments can be created and rebuilt repeatably.
- Use GitHub Actions to test and deploy changes; contribute as needed to legacy C#/.NET projects.
- Built batch data pipelines for uBreakiFix store data: AWS Lambda functions on cron schedules pull API data (camera data, device status, door-sensor people counts, store hours, network uptime) into PostgreSQL, with alert emails on failed jobs.
- Wrote SQL queries against the PostgreSQL store data feeding Power BI visuals of store locations, time zones, and visitor counts by hour and day; analyzed traffic patterns to explain low-revenue stores for leaders.
- Separately, built Power Platform apps in Microsoft's managed environment and security model, including an AI job-description generator: a Copilot Studio RAG agent over HR documents, a Power Apps code app (React and TypeScript, under a year), and Dataverse tables; promoted dev to prod with Power Platform Pipelines.
- Modeled a process in Dataverse and delivered a model-driven app, consolidating records previously tracked across disconnected spreadsheets into a single governed data source.
- Automate daily and monthly reports using Python and openpyxl, replacing manual monitoring.
- Create databases from multiple endpoints to support Power BI reporting; leverage pay-as-you-go cloud services to reduce cost.
- Discover potential automation opportunities across teams and communicate reporting insights to leaders.
- Use AI coding agents (Claude Code, GitHub Copilot, Cursor) across internal tooling and automation projects.
- Tools: Python, Django, SQL, PostgreSQL, AWS (Lambda, ECS), Terraform, GitHub Actions, Power Apps (code apps, canvas, model-driven), Copilot Studio, Dataverse, Power Automate, Power BI, Excel, Git

Instructor for Excel and Power BI 2022 – 2023
Renas Academy | Nashville, TN

- Taught Excel and Power BI with a focus on practical application, data analysis, and student engagement.
- Excel: formulas, pivot tables, graphs, data formatting, VBA, and dashboards.
- Power BI: demonstrated DAX and Query Editor through hands-on demo projects.
- Managed classroom dynamics, provided actionable feedback on assignments, and used real-world data examples to teach reporting and data storytelling.

Apprentice Data Analyst 2020 – 2022

Nashville Software School | Nashville, TN

- Comprehensive training in data analysis methods and tools.
- Project-based learning in data cleaning, exploration, report creation, and visualization.
- Hands-on training in each step of the analytics process using SQL, Excel, Power BI, and Python.

Assistant Manager 2014 – 2020

Brugada Bar & Restaurant | Nashville, TN

- Managed operations, personnel records, and inventory; analyzed sales data in Excel for the general manager.

Office Administrator 2007 – 2014

Department of Security and Affairs, Kirkuk North Oil Company | Kirkuk, Iraq

- Supervised staff, maintained the department's database, and submitted timely reporting on outstanding items.

Interpreter 2009 – 2010

Mission Essential Personnel / Global Linguist Solutions (GLS) | Kirkuk, Iraq

- Supported communication in English, Arabic, and Kurdish during Operation Iraqi Freedom, aiding interactions between U.S. leaders, foreign security forces, and local communities.
- Translated classified documents during meetings, training, and patrols; received U.S. Army commendations for exemplary service.

PROJECTS

TableEdge — Personal Project (Weekends) 2025 – Present

tableedge.io | Restaurant operations app

- Built and shipped an app now in production with one paying restaurant customer, covering administration, sales tracking, and cost and EBITDA reporting.
- Designed and shipped the full stack in TypeScript and React on Supabase (PostgreSQL) and Vercel, including multi-tenant schema design, authentication, REST APIs, and deployment.
- Built TableEdge's agent flows through iterative prompt design with Claude.
- Built multi-platform API integrations with Toast, Square, and QuickBooks to pull POS sales and accounting data into the app.
- Designed the TableEdge landing page using the Figma MCP.

EDUCATION & CERTIFICATIONS

ServiceNow Admin Certificate, 2025

Microsoft Learn: Power Platform training badges

AWS Cloud Practitioner, 2023

Computer Science (M.S.), 3 hrs credit — Tennessee State University, Nashville, TN, 2021

Data Analytics Bootcamp — Nashville Software School, Nashville, TN, 2020

Computer Science (B.S.), 40 hrs credit — Middle Tennessee State University, Murfreesboro, TN, 2016 – 2018

Bachelor's in Computer Science / Software Engineering — Foundation of Technical Education, Kirkuk, Iraq, 2003 – 2007

SKILLS

Languages & Frameworks: Python, Django, SQL, DAX; TypeScript/JavaScript and React (Power Apps code apps)

Data & Reporting: Power BI (DAX), PostgreSQL, SQL, Excel/VBA, data visualization

Platforms & Cloud: AWS (Lambda, ECS), PostgreSQL, Supabase, Vercel, Azure (App Service, Functions), Terraform (infrastructure as code), GitHub Actions (CI/CD), Power Platform (Power Apps code apps & canvas apps, Dataverse, Power Automate, Copilot Studio, Pipelines), SharePoint Online, Git, Jira, Confluence, BigPanda, Figma

AI-Assisted Development: AI agent flows (iterative prompt design with Claude), RAG agents (Copilot Studio), prompt engineering, Claude Code, GitHub Copilot, Cursor

Working knowledge: Docker, Kubernetes, Google Cloud
